

Pizza Sales Management System - DBMS Project Report

Objective

To manage pizza orders, customers, menu items, inventory, employees, and sales records efficiently using a relational database.

Modules

1. Customer Management
2. Menu Management
3. Order Management
4. Employee Management
5. Inventory Management
6. Sales Reports

Database Tables

Customers(CustomerID, Name, Phone, Address)

Pizzas(PizzaID, Name, Size, Price, Category)

Orders(OrderID, CustomerID, Date, TotalAmount, Status)

OrderDetails(OrderID, PizzaID, Quantity)

Employees(EmployeeID, Name, Role, Salary)

Inventory(ItemID, ItemName, Quantity)

Relationships

One customer places many orders. One order contains many pizzas. One pizza appears in many orders.

Sample SQL

```
SELECT PizzaID, SUM(Quantity) AS TotalSold FROM OrderDetails GROUP BY PizzaID ORDER BY TotalSold DESC;
```

Advanced Features

Admin Login, Bill Generation, Discount Coupons, Dashboard Charts

Tools

Frontend: HTML/CSS/Java or Python GUI

Backend: MySQL / PostgreSQL

Conclusion

This project demonstrates DBMS concepts such as keys, relationships, normalization, joins, and reports in a practical business scenario.
